# Under-Desk Cable Management

PowerData Technologies offer two solutions to manage cables under the desktop, ideally there should be no unmanaged cables seen on the floor, so the user would never unwittingly unplug a device or worst still trip over a loose power cord.

The Snake runs under the desktop, the wire basket can be screwed under the desktop or the side modesty panel.
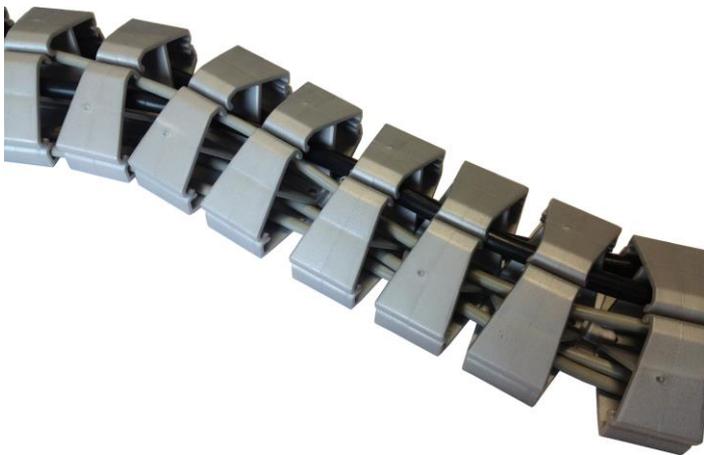

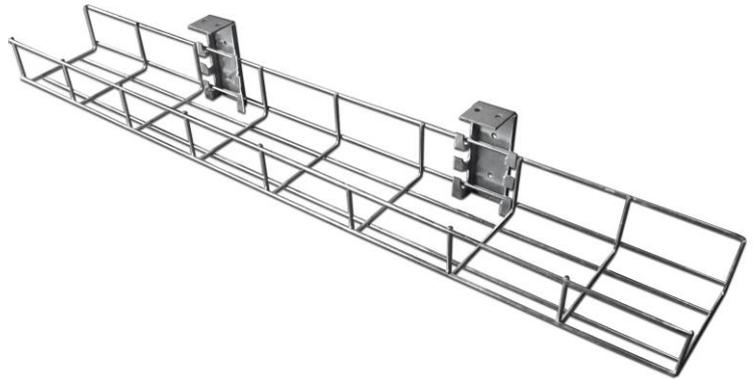

We also have a range of desktop to floor 'Slinky' cable tidies, so cables can be managed horizontally as these under-desk products or vertically.

## Cable Tray

A simple cable management system, the Cable Tray is mounted under the desk, and used to route power and data cables. Two mounting brackets allow for the Cable Tray to be mounted either under the desk, or to clip directly to a modesty panel.

The 800 and 1200mm lengths means the Cable Tray is ideal not only for routing cables, but also for housing under desk power and data units, such as the P-Pack range.

The Cable Tray is 100mm wide, 60mm deep, with custom lengths available.

## Snake

A completely flexible under desk cable management system, users can add or subtract the modular 3 compartment segments and direct in a straight line or bend to suit the application.

- Nail or screw in
- 3-Compartment
- 1-metre
- 25 segments
- Push fit cables
- Flexible and Modular
