Databoxes

Product Description

Databoxes, also known as GOP boxes or POD boxes, are a volume installation product for use in raised floor systems. They are metal boxes comprised of a main box and lid, with 6C data apertures in the lid, and a keyed gland entry in the main box.

The range is available in 6 versions from 2 way up to 16 way, with both 25mm and 32mm gland holes.

The 2-way, 4-way, and 6-way databoxes are available in both a horizontal and a vertical presentation. Vertical databoxes are suited for Cat6A installations.

The gland holes on databoxes feature a keyed entry, for ease of conduit installation, and anchor brackets are available for conduit management.

Integral cable tie saddles inside of the databox allow for better for cable management.

The 8 way databox has 2 x 25mm gland holes, and the 12 way and 16 way databoxes have 2 x 32mm gland holes.

Anchor Brackets

Anchor brackets are available in 25mm and 32mm.

They feature a keyed gland entry, meaning installers can terminate data before fixing the flexible conduit to the box, making for a faster installation.

Integral cable tie saddles further increase cable management capabilities.
