

Sit-Stand Workstation

The Sit-Stand Workstation allows the end user to easily switch between sitting and standing at their desk. Changing your working position often keeps your body active, whilst reducing any risks associated with a sedentary lifestyle.

The Workstation features a main shelf for a monitor, and a removable second shelf for a keyboard and mouse. The Workstation uses the same gas-assisted lift mechanism as the Gas-lift monitor arms, meaning the Workstation is easily repositioned without the use of any screws or levers.
